Morningstar acquired Standard & Poor's global fund data business on March 15th, 2007. Since then Morningstar Asia Limited has been appointed by the Funds Performance Tracking Committee (FPTC), a committee chaired by and comprising of representatives from Investment Management Association of Singapore (IMAS), Life Insurance Association of Singapore, and Securities Investors Association (Singapore), to monitor the performance of all unit trusts and investment-linked insurance products included under the CPF Investment Scheme (CPFIS). This report documents the findings of Morningstar Asia Limited for the three months ended Mar. 30, 2007.

UPDATES ON CPFIS-INCLUDED FUNDS

Below are some summary statistics:

- **Total Number of CPFIS-Included Funds:** As at Mar 30, 2007, there were a total of 226 unit trusts and 199 investment-linked insurance products (ILPs) included under the CPFIS.
- **New Products:** two unit trusts and eight investment-linked insurance products were added to the CPFIS in Q1 2007.
- **De-listed Products:** seven unit trusts and eight investment-linked insurance products were de-listed from the CPFIS in Q1 2007.

MARKET REVIEW BY MORNINGSTAR

Market Review (1Q2007)

1. Equities

AROUND THE WORLD

Global stock markets had a roller-coaster ride in the first quarter of 2007. The Dow Jones Industrial Average (DJIA) plunged more than 400 points on February 27, following the near-9% drop in the Shanghai Composite Index as investors feared that China would implement a capital gain tax and increase interest rates soon. Investors were also spooked by the deteriorating U.S. subprime loans (loans to less creditworthy borrowers), concerned that this could spread to the broader housing market and affect consumer spending in the world's largest economy. At its March meeting, U.S. Federal Reserve opted to hold a key interest rate steady at 5.25%, and seemed to hint that it was more likely to cut rates than raise them in the near term. This helped to improve investor sentiment, but the DJIA still ended the quarter in negative territory, down 0.9% to close at 12,354.35. The broader S&P 500 Index and the Nasdaq Composite Index managed slight gains to close at 1,420.86 (+0.2%) and 2,421.64 (+1.4%) respectively.

Stock markets in Europe performed slightly better given prices that looked attractive relative to those of its U.S. peers. The FTSE 100 and DAX ended the quarter up 1.4% and 4.9% respectively, while Japan's Topix was up 1.9%.

IN ASIA

Among the Asian bourses, the Shanghai A and Shanghai B indices continued to stand out with gains of 18.9% (to 3,346.35) and 36.7% (to 177.80) respectively, although these gains were more modest than those in 2006. Banking stocks continued to be among the drivers given their solid fundamentals and fast earnings growth. Earlier speculation of a merger of the two indices, which had propelled a surge in Hong Kong's H-shares, fizzled out leaving the H-share index down 7.0% for the quarter. With the Fed's decision to leave the option open to raise interest rates to tame inflation and Hong Kong's currency peg, the Hang Seng Index's closed the quarter down 0.8% at 19,800.93.

Japanese exporters were particularly held back by concerns over the U.S. economy, with Japan's benchmark Nikkei 225 ending the quarter flat (+0.4%). Other Asian bourses registered low single-digit gains except for Malaysia's Kuala Lumpur Composite Index, which rose 13.7% to 1,246.9. The KLCI received a significant boost in March after the government scrapped real property gains tax on transactions from April 1, 2007 onwards and rolled out incentives for investors in the Iskandar Development Region in the south of the country. Singapore's Straits Times Index also did well, up 8.2% to 3,231.24, driven by banking and property stocks towards the end of the quarter.

Index	31-Mar-07	31-Dec-06	QoQ % change
DJIA	12354.4	12,463.2	-0.9%
S&P 500	1420.9	1,418.3	0.2%
Nasdaq	2421.6	2,415.3	0.3%
FTSE 100	6308.0	6,220.8	1.4%
DAX	6917.0	6,596.9	4.9%
Topix	1713.6	1,681.1	1.9%
Hang Seng	19800.9	19,964.7	-0.8%
H-Shares	9616.2	10,340.4	-7.0%
S&P/ASX 200	5995.0	5,669.9	5.7%
Shanghai A	3346.4	2,815.1	18.9%
Shanghai B	177.8	130.1	36.7%
TWSE	7884.4	7,823.7	0.8%
KOSPI	1452.6	1,434.5	1.3%
STI	3231.2	2,985.8	8.2%
SET	673.7	679.8	-0.9%
KLCI	1246.9	1,096.2	13.7%
JCI	1830.9	1,805.5	1.4%
PCOMP	3203.6	2,982.5	7.4%

2. Performance of Worldwide Indices Based on SGD

The above indices represent the various major financial markets/sectors in the following manner:

- ***Citi WGBI (Citigroup World Gov't. Bond Index) Index:*** Global bonds
- ***MSCI AC Asia Fr x Japan Index:*** Asian ex-Japan equities
- ***MSCI World Index:*** Global equities
- ***Singapore Straits Times Index:*** Singapore equities
- ***UOB SGS Index:*** Singapore bonds

The minimum annual interest rates paid by the CPF Board for the various accounts are as follows:

- ***Ordinary:*** 2.5%
- ***Special:*** 4.0%
- ***Medisave:*** 4.0%
- ***Retirement:*** 4.0%

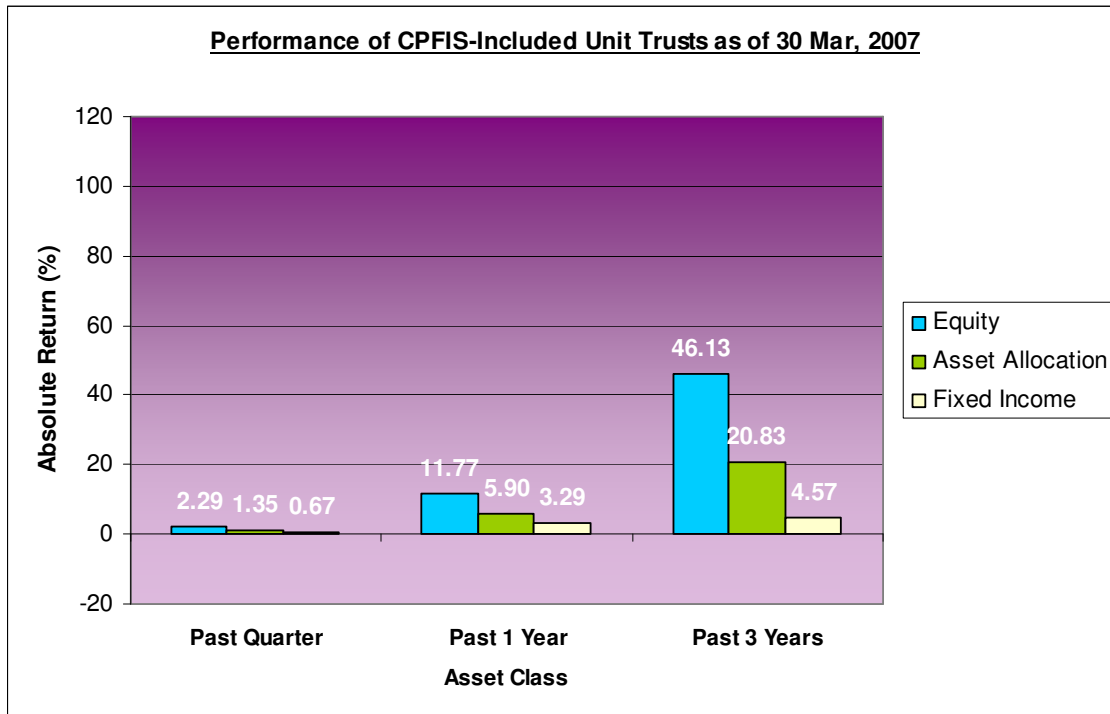

Please note that the above interest rates are based on the 12-month fixed deposit and month-end savings rates of the major local banks and are revised quarterly. The interest is computed monthly, and is credited and compounded annually.

SUMMARY OF ABSOLUTE PERFORMANCE

1. Average Absolute Performance

The average absolute returns of the various asset classes¹ of CPFIS-included unit trusts and ILPs are summarized in the charts below.

Average Performance of CPFIS-Included Unit Trusts

In the first quarter, the performance of CPFIS-included unit trusts achieved an average return of 2.03%. Equity funds were the best performer, with an average positive return of 2.29% in this period.

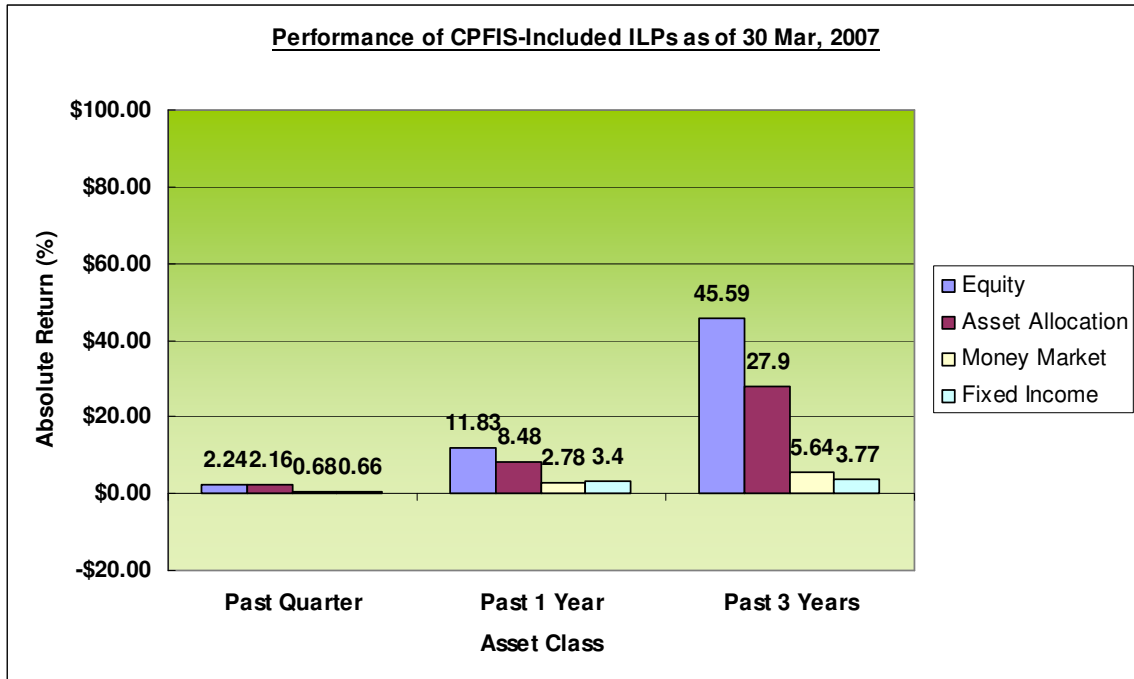

Over a one-year period, equity funds had an average return of 11.77%, exceeding the performance of the two other asset classes. Asset allocation funds and fixed income funds posted returns of 5.9% and 3.29%, respectively. The average return for CPFIS-included unit trusts for the 12 months to March 30, 2007, was 10.32%.

¹ Definitions of the asset classes are as follows:

- **Money Market:** Funds investing solely in money market or cash instruments with duration ranging from overnight to 12 months. Investments will normally be held in bank deposits, short-term monetary investments (e.g. T. Bills and certificates of deposit).
- **Fixed Income:** Funds investing in excess of 70% in fixed interest securities (corporate, government, index-linked etc.).
- **Asset Allocation:** Funds with a portfolio principally invested in equity, fixed interest and money market securities but typically with no more than 60% in any one asset class.
- **Equity:** Funds investing in excess of 70% in equities or related instruments. Such funds may have an objective of capital and/or income growth; and may be passively (i.e. index tracking) or actively managed.

Over the past three years, equity funds again outperformed the two other asset classes with an average return of 46.13%. The average return generated by CPFIS-included unit trusts over this period was 39.14%.

Average Performance of CPFIS-Included ILPs

The average return for CPFIS-included ILPs in Q1 was 2.03%. Equity funds, with an average return of 2.24%, exceeded the performance of the other asset classes.

In the 12 months to March 30, 2007, equity funds outperformed the other categories, producing an 11.83% average return. Average returns for asset allocation, money market and fixed income funds in the same period were 8.48%, 2.78%, and 3.4%, respectively. The overall return for CPFIS-included ILPs was an average 9.71%.

In the three-year period, the average performances of all fund categories were satisfactory, with the overall returns of CPFIS-included ILPs at 34.76%. Equity funds fared the best, with an average return of 45.59%. The performance of the asset allocation category was also impressive, with an average return of 27.9%. The average returns of money market funds and fixed income funds were 5.64% and 3.77%, respectively.

2. Overview of Average, Best, and Worst Performance by Asset Class

The tables highlight the average return for each asset class, as well as the returns achieved by the best and worst performer within each asset class. (All data as of 30 March 2007)

CPFIS-Included Unit Trusts

For the return performance of individual funds, please refer to the Quantitative Performance Analysis UT and Quantitative Performance Analysis ILP reports.

3. Positive and Negative Returns Distribution for Unit Trusts and ILPs

	Last Quarter	Last 3 Years
Singapore Unit Trusts		
Funds with Positive Returns	170 (75.22%)	183 (94.81%)
Funds with Negative Returns	56 (24.78%)	10 (5.19%)
Singapore Insurance Linked		
Funds with Positive Returns	143 (78.57%)	139 (95.21%)
Funds with Negative Returns	39 (21.43%)	7 (4.79%)

Note: Data as of Mar.30, 2007.

In the first quarter of 2007, the percentage of funds with positive returns was 75.22% for unit trusts and 78.57% for ILPs. Most of the performers in Q1 achieved positive returns.

Over the three years to Mar. 30, 2007, 94.81% of all CPFIS-included unit trusts and 95.21% of ILPs produced positive returns. The funds in positive territory were mostly from the following categories:

a) CPFIS-Included Unit Trust Universe

- Asset allocation neutral funds that are invested globally;
- Asia-Pacific ex Japan equity markets;
- European equity markets;
- Global equity markets; and

b) CPFIS-Included ILP Universe

- Asset allocation neutral funds that are invested into global markets;
- Asset allocation dynamic funds that are invested into global markets;
- Asia-Pacific ex Japan equity markets; and
- Global equity markets.

SUMMARY OF RISK-ADJUSTED PERFORMANCE

1. Risk-Return Analysis Over Past Three Years

The scatterplots below compare the return performance of CPFIS-included unit trusts and ILPs against their risk level (i.e. volatility). Return performance is shown on the vertical axis and the funds' volatility is on the horizontal axis. Using the median lines* (dotted in red) as a divider, four distinct quadrants are formed, representing the following:

- **Quadrant A:** Funds with **above-average return** but **below-average risk**
- **Quadrant B:** Funds with **above-average return** and **above-average risk**
- **Quadrant C:** Funds with **below-average return** and **below-average risk**
- **Quadrant D:** Funds with **below-average return** but **above-average risk**

All quadrants, with the exception of D, are desirable depending on the investor's risk tolerance level and return requirements. Funds in Quadrant A may be seen as the most optimal choice, where the fund managers have managed to produce relatively higher returns while minimizing the fund's volatility.

Over the three-year period to Mar. 30, 2007, 15.03% of all CPFIS-included unit trusts fell into quadrant A, while 21.24% of the funds were in quadrant D.

CPFIS-Included Unit Trusts

CPFIS-Included ILPs

In the three years to Mar. 30, 2007, 12.33% of the ILPs were in quadrant A, while 19.18% of the CPFIS-included ILPs had below-average returns but above-average risk, hence falling into quadrant D.

For the complete list of funds in each quadrant, please see Appendix 1.

*The vertical and horizontal dotted lines that divide the graph into four quadrants are calculated/drawn by taking the mean average of all the annualized monthly returns and annualized monthly risk figures.

PERFORMANCE RANKING: S&P FUND STARS

1. Background

The S&P Fund Stars is derived from that a fund's monthly performance relative to its sector average (i.e. peer average) is calculated for each of the 36 months over the three years to date. The average and volatility of these 36 numbers are then converted in a S&P Fund Stars ranking.

The distribution of the S&P Fund Stars is as follows:

★★★★★	Top 10% of the sector
★★★★	Top 11-30% of the sector
★★★	Top 31-50% of the sector
★★	Next 25% of the sector
★	Bottom 25% of the sector

It must be noted that to be eligible for a S&P Fund Stars ranking, the fund must have at least a three-year investment history and be in a sector where five or more funds meet this minimum investment history requirement. The calculation of S&P Fund Stars is based on the entire universe of unit trusts and ILPs that are registered for sale in Singapore and not only limited to CPFIS-included funds.

FURTHER INFORMATION

Additional information can be found in the appendices:

- *Appendix 1:* Complete List of Funds in Each Quadrant of the Risk/Return Chart
- *Appendix 2:* S&P Fund Stars Methodology
- *Appendix 3:* Investment Terminology Definition

For a soft copy of this report as well as the most-to-date performance data on CPFIS-included unit trusts and ILPs, please visit www.fundsingapore.com.

NOTE

All returns are calculated on a bid-to-bid basis in Singapore dollars, with gross income re-invested.

DISCLAIMERS

The data provided in this report is for information only and not deemed to be financial advice or offer to sell, or a solicitation or an offer to buy or subscribe to or hold any fund.

Past performance is not indicative of future performance. All investments involve risk – in other words, the price of units and income from them can go down as well as up. Before investing in any fund, you should carefully read the literature about the fund, including its Explanatory Memorandum.

All data contained in this report has been provided to Morningstar Asia Limited by the management groups or insurers who manage the unit trusts or ILPs that are included in the CPFIS. While Morningstar Asia Limited has made reasonable efforts to ensure the accuracy of the information obtained, it does not accept any responsibility with regard to the accuracy or completeness of the information provided or any liability for the investment decisions of investors or any loss arising therefrom.

APPENDIX 2

S&P Fund Stars Methodology

The S&P Fund Stars is calculated using a fund's monthly performance relative to its sector average for each of the 36 months to date. The average and volatility of these 36 months is used to calculate the Fund Stars ranking.

To be eligible for the S&P Fund Stars, a fund must possess three years of investment history and belong to a sector that contains five or more funds, all with the minimum investment history.

S&P Fund Stars Calculation

1. RELATIVE PERFORMANCE

Definition: This is the performance of the fund less the performance of its sector average (average performance of its peers).

Example: If a fund rises 6% in a month and its sector average by 4% in the same month, then the fund's relative performance is +2%. This number is calculated for each of the past 36 months.

2. AVERAGE RELATIVE PERFORMANCE

Definition: By calculating the average of the fund's latest 36 monthly relative performance, we are measuring its tendency on average to out- or under-perform the other funds in its sector. The higher the average the more the fund has outperformed its peers over the past 36 months.

3. VOLATILITY OF RELATIVE PERFORMANCE

Definition: Volatility (standard deviation) is a statistical method for measuring how much a series of values deviates (how much it moves up and down) from its average. By calculating the volatility of the fund's 36 monthly relative performance, we are measuring how consistently the fund has performed vis-à-vis its peers. The higher the volatility, the less consistent the fund's performance relative to its peers.

4. RELATIVE RETURN/VOLATILITY RATIO

Definition: By dividing the fund's average relative performance by the volatility of its relative performance, we are measuring its ability to not only outperform its peers but to also do so consistently. The higher the ratio, the greater the fund's ability to outperform its peers on a consistent basis.

$\frac{\text{Average monthly relative performance over 3 years}}{\text{Volatility of monthly relative performance over 3 years}} = \text{Relative return / volatility ratio}$

Allocation of the S&P Fund Stars

Suppose a sector contains 100 funds, then the S&P Fund Stars will be allocated as follows:

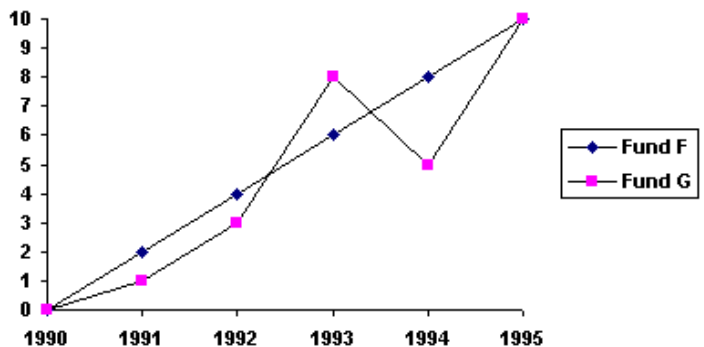

★★★★★	Top 10%	10 funds
★★★★	Top 11-30%	20 funds
★★★	Top 31-50%	20 funds
★★	Next 25%	25 funds
★	Bottom 25%	25 funds

Examples

A fund with a ratio in the top 10% of its sector receives 5 Fund Stars, whilst a fund with a ratio in the bottom 25% of its sector receives one Fund Star.

	Relative Return	Relative Volatility	Ratio	Rank	S&P Fund Stars
Fund A	50%	5	10.0	1	★★★★★
Fund B	30%	6	5.0	5	★★★
Fund C	10%	4	2.5	9	★
Fund D	30%	4	7.5	2	★★★★
Fund E	40%	6	6.6	3	★★★★
Fund F	20%	4.5	4.4	6	★★
Fund G	30%	5	6.0	4	★★★
Fund H	3.4%	1	3.4	7	★★
Fund I	2.7%	1	2.7	8	★★
Fund J	6.0%	3	2.0	10	★

Funds with identical performance but different volatility will have a different ratio. In the example below, the returns of Fund F and Fund G are identical, however our consistency analysis shows that the volatility of G is greater than F, therefore F has a higher S&P Fund Star ranking than G.

	Relative Return	Relative Volatility	Ratio	S&P Fund Stars
Fund F	50%	5	10.0	★★★★
Fund G	50%	6	8.3	★★★

On the other hand, funds with different returns and risk levels can have the same S&P Fund Star ranking. As an illustration, although Funds H and J both have 3 stars, H has a higher return than J, while J has lower volatility.

	Relative Return	Relative Volatility	Ratio	S&P Fund Stars
Fund H	50%	5	10.0	★★★
Fund J	40%	4	10.0	★★★

From this example, we can see that despite their difference in return and volatility, the performance consistency experienced by each of the funds is identical, hence warranting the same S&P Fund Stars ranking.

APPENDIX 3

Investment Terminology Definition

Risk Classification

CPF Board's consultant, Mercer Investment Consulting, has developed a risk classification system for the CPFIS that assigns various risk levels to permitted investments. The unit trust or ILP with a greater proportion of its assets invested in the more volatile stock market will have a higher equity risk. Conversely, the greater the proportion of the fund's assets that are in bonds and cash, the lower its equity risk. Based on their level of equity risk, CPFIS-included unit trusts and ILPs will be assigned one of the following risk categories:

- Lower Risk
- Low to Medium Risk
- Medium to High Risk
- Higher Risk

As of Mar. 30, 2007, the distribution of CPFIS-included investments in the four different risk categories is as below:

Risk Classification	Unit Trusts	ILPs
Higher Risk	163	112
Medium to High Risk	25	54
Low to Medium Risk	35	24
Lower Risk	3	9

Further information on the CPFIS Risk Classification System can be found in the handbook entitled "CPF Investment Scheme Risk Classification System – Investing to Match Your Risk Profile," which can be downloaded from this link:

<http://mycpf.cpf.gov.sg/Members/Gen-Info/FAQ/Investment/INV-Risk.htm>

Quantitative Analysis

- **Expense Ratio:** The operating costs, including management fees, of a CPFIS-included unit trust or ILP expressed as a percentage of the fund's average net assets for a given time period. The expense ratio is furnished to Morningstar Asia Limited by the management groups and insurers, and is calculated according to the guidelines set out by the Investment Management Association of Singapore (IMAS).

In accordance with IMAS' guidelines, the expense ratio is calculated as the average of the annualized expense ratios of the two last six-month periods, stated on an annualized basis. The formula for this is as follows:

$$\frac{\text{Expenses}}{\text{Net Asset Value}} \times 100\%$$

Items taken as expenses in the above calculation include, but are not limited to:

- Management fee
- Trustee fee
- Administration fee
- Custodian, sub-custodian and depository fees
- Registrar fees
- Printing & distribution costs
- Audit fees
- Amortized expenses
- GST on expenses

On the issue of feeder funds, to ensure their comparability with direct investment funds, the expense ratio should look through the feeder structure and include all expenses incurred at both the Singapore and parent-fund level. The calculation guidelines for feeder funds' expense ratio are as follows:

- Annualized expense ratio for the Singapore feeder fund plus that of the parent-fund
- Both components of the expense ratio should be calculated in accordance to requirements specified above.

For further information, please refer to <http://www.imas.org.sg>

- **Gain/Loss Ratio:** This is the sum of positive percentage fund returns divided by the sum of negative percentage fund returns over the past three years to date. The higher the resultant ratio, the greater the proportion of positive returns versus negative returns, hence the better the fund's performance.
- **Information Ratio:** It is calculated by taking the monthly difference between a fund's gross return and its benchmark return (in this case the sector average of the S&P sector into which the fund falls), and then dividing that figure by the standard deviation of the monthly differences. This ratio helps investors understand how well the fund has been managed on a risk-adjusted basis relative to its peers.
- **Maximum Loss:** The worst three-month return produced by a fund over the past three years to date.
- **Sharpe Ratio:** Developed by William Sharpe, it is a measurement of a fund's annualized return that is in excess of the risk-free rate (a theoretical interest rate that would be returned on an investment that is completely free of risk) and adjusted for the fund's volatility. The calculation is as follows: (Fund Return – Risk-Free Return)/Fund Standard Deviation. From this formula, it can be derived that the higher a fund's Sharpe ratio, the better its returns relative to the amount of investment risk it has taken.

The reason this relationship between risk and return holds is simple: the higher a fund's standard deviation, the larger the denominator of the Sharpe ratio. Hence, a larger numerator (fund's excess return) will be required to have a high Sharpe ratio. Conversely, a fund with moderate returns will have a relatively small numerator, however, should its volatility also be low, the fund's Sharpe ratio can still be quite high.

- ***Standard Deviation:*** A proxy for the risk level of a fund, standard deviation measures the annualized variability of a fund's returns. A high standard deviation indicates that a fund's returns have been volatile while a low figure would be the reverse.

END OF REPORT
