Standard & Poor's Fund Services Asia has been appointed by the Funds Performance Tracking Committee (FPTC), a committee chaired by and comprising of representatives from Investment Management Association of Singapore (IMAS), Life Insurance Association of Singapore and Securities Investors Association (Singapore), to monitor the performance of all unit trusts and investment-linked insurance products included under the CPF Investment Scheme (CPFIS). This report documents the findings of Standard & Poor's Fund Services for the period ended June 30, 2005 (Q2 2005).

UPDATES ON CPFIS-INCLUDED FUNDS

The number of funds included under the CPFIS has again increased over the past quarter. Below are some summary statistics:

- **Total Number of CPFIS-Included Funds:** As at June 30, 2005, there were altogether 248 unit trusts and 189 investment-linked insurance products (ILPs) included under the CPFIS.
- **New Products:** Seven new unit trusts and nine investment-linked insurance products have been added to the CPFIS in Q2.
- **De-listed Products:** Two unit trust and two investment-linked insurance products were de-listed from the CPFIS in Q2.
- **Management Group Updates:** Navigator Investment Services Ltd. (Navigator) was included under CPFIS on April 7, 2005.

1. Equities

Around the World

Major equity markets around the world were generally stronger in the second quarter of 2005, with the exception of the Dow Jones Industrial Average (DJIA) and Japan's Topix. The S&P500 rose 0.9% during the quarter, as stocks rallied on the idea that the Fed may soon cease raising interest rates because inflation is in check. The DJIA ended the quarter 2.2% lower, as it could not recover steep losses in April triggered by IBM's disappointing earnings report. Japan's Topix eased 0.4%, taking a breather after gains in the past two quarters.

In Asia, the Shanghai market took a beating on fears of an oversupply of shares, following a pilot scheme to merge non-tradable and tradeable shares. Other major Asian equity markets rose, led by Hong Kong, on earnings optimism.

European stocks rose on restructuring and cost-cutting initiatives. UK's FTSE 100 gained 4.5% and Germany's DAX rose 5.5%.

In Asia

The Chinese stock market was the worst performer during the second quarter. Fears of an oversupply of shares, following a pilot scheme to merge non-tradable and tradable shares, brought the Shanghai A Index down 8.4%.

Hong Kong led gainers among the Asian markets in the second quarter, with the Hang Seng Index rising 5.1%. CNOOC led the way on soaring oil prices, while property stocks remained firm despite rises in mortgage rates, and telecom stocks did well on better-than-expected subscriber growth.

The other North Asian markets also performed well. South Korea's KOSPI gained 4.4%, despite a poor economic outlook, due to strong liquidity flows triggered by low interest rates. Taiwan's TWSE Index was 3.9% higher due to improved sentiment on technology stocks.

Southeast Asian markets all advanced, except Thailand and the Philippines. Singapore's Straits Times Index rose 3.3%, boosted by oil & gas, property and semiconductor stocks. Malaysia's Kuala Lumpur Composite Index rose 1.9% as investors returned after a 4% battering in the first quarter. The Jakarta Composite Index gained 3.9% on earnings optimism and improving confidence in the economy. Thailand's SET Index eased 0.9% on the concern that high fuel prices would dampen consumer demand, while the Philippines Stock Exchange Composite Index fell 1.6% on political worries.

	March 31, 2005	June 30, 2005	chg
DJIA	10,503.76	10,274.97	-2.2%
S&P 500	1,180.59	1,191.33	0.9%
FTSE 100	4,894.40	5,113.20	4.5%
DAX	4,348.77	4,586.28	5.5%
Topix	1,182.18	1,177.20	-0.4%
Hang Seng	13,516.88	14,201.06	5.1%
S&P/ASX 200	4,109.90	4,277.50	4.1%
Shanghai A	1,239.27	1,135.12	-8.4%
Shanghai B	77.22	65.30	-15.4%
Taiwan Stock Exchange	6,005.88	6,241.94	3.9%

Jakarta Composite	1,080.17	1,122.38	3.9%
Philippine Composite	1,954.69	1,924.23	-1.6%

For more research and analysis on Asian equity markets, please refer to Standard & Poor's Asian Equity Research's website at www.ams.standardandpoors.com.

1. Performance of Worldwide Indices Based on SGD

The above indices represent the various major financial markets/sectors in the following manner:

- ***Citi WGBI (Citigroup World Gov't. Bond Index) Index:*** Global bonds
- ***MSCI World Index:*** Global equities
- ***MSCI AC Asia Fr x Japan Index:*** Asian ex-Japan equities
- ***Singapore Straits Times Index:*** Singapore equities
- ***UOB SGS Index:*** Singapore bonds

The minimum annual interest rates paid by the CPF Board for the various accounts are as follows:

- ***Ordinary:*** 2.5%
- ***Special:*** 4.0%
- ***Medisave:*** 4.0%
- ***Retirement:*** 4.0%

Please note that the above interest rates are based on the 12-month fixed deposit and month-end savings rates of the major local banks and are revised quarterly. The interest is computed monthly, and is credited and compounded annually.

SUMMARY OF ABSOLUTE PERFORMANCE

1. Average Absolute Performance

The average absolute returns of the various asset classes¹ of CPFIS-included unit trusts and ILPs are summarized in the graphs below.

Average Performance of CPFIS-Included Unit Trusts

Over the second quarter, the performance of CPFIS-included unit trusts was on average 3.11%. Equity funds came out as the best performer, with an average return of 3.50%.

In the longer one-year period, equity funds with an average return of 11.40% exceeded the performance of the two other asset classes. Asset allocation funds and fixed income funds posted returns of 6.69% and 3.50%, respectively. Average return for CPFIS-included unit trusts for the 12 months to June 30, 2005 was 9.77%.

Over the past three years, equity funds again outperformed the two other asset classes with an average return of 36.31%. Average return generated by CPFIS-included unit trusts over this period was 31.32%.

¹ Definitions of the asset classes are as follows:

- **Money Market:** Funds investing solely in money market or cash instruments with duration ranging from overnight to 12 months. Investments will normally be held in bank deposits, short-term monetary investments (e.g. T. Bills and certificates of deposit).
- **Fixed Income:** Funds investing in excess of 70% in fixed interest securities (corporate, government, index-linked etc.).
- **Asset Allocation:** Funds with a portfolio principally invested in equity, fixed interest and money market securities but typically with no more than 60% in any one asset class.
- **Equity:** Funds investing in excess of 70% in equities or related instruments. Such funds may have an objective of capital and/or income growth; and may be passively (i.e. index tracking) or actively managed.

Average Performance of CPFIS-Included ILPs

The average return for CPFIS-included ILPs in Q2 was 3.47%. All four asset classes produced positive return over the past quarter.

In the 12 months to June 30, equity funds have outperformed the other categories, producing 10.87% in average return. Average returns for asset allocation, fixed income and money market funds in the same period are 9.33%, 3.98% and 0.92%, respectively, with the overall return for CPFIS-included ILPs at 9.47% on average.

In the three-year period, the average performances of all fund categories are satisfactory. Asset Allocation funds fared the best, with an average return of 28.60%. The performance of the equity category is impressive as well with an average return of 27.61%. Fixed Income and money market funds' average returns are 17.11% and 1.51%, respectively. The overall performance of CPFIS-included ILPs is 26.37% over the past three years.

2. Overview of Average, Best and Worst Performance by Asset Class

The tables highlight the average return for each asset class as well as the returns achieved by the best and worst performer within each asset class. *(All data as of June 30, 2005.)*

CPFIS-Included Unit Trusts

For the return performance of individual funds, please refer to the Quantitative Performance Analysis UT and Quantitative Performance Analysis ILP reports.

3. Positive and Negative Returns Distribution for Unit Trusts and ILPs

	Last Quarter	Last 3 Years
Singapore Unit Trusts		
Funds with Positive Returns	213 (88.38%)	193 (97.97%)
Funds with Negative Returns	28 (11.62%)	4 (2.03%)
Singapore Insurance Linked		
Funds with Positive Returns	175 (96.69%)	125 (96.90%)
Funds with Negative Returns	6 (3.31%)	4 (3.10%)

Note: Data as of June 30, 2005.

In the quarter ended June 30, 2005, the percentage of funds with positive returns is 88.38% for unit trusts and 96.69% for ILPs, and the majority of this group of positive-return performers are equity funds.

For the longer three-year period, 97.97% of all CPFIS-included unit trusts and 96.90% of ILPs produced positive returns. The funds that are in the positive territory are mostly from the following categories:

a) CPFIS-Included Unit Trust Universe

- Asset allocation neutral funds that are invested globally
- Asia-Pacific ex Japan's equity markets
- European equity markets
- Global equity markets
- TMT Global

b) CPFIS-Included ILP Universe

- Asset allocation neutral funds that are invested into global markets
- Asia-Pacific ex Japan's equity markets
- Global equity markets

SUMMARY OF RISK-ADJUSTED PERFORMANCE

1. Risk-Return Analysis over Past Three Years

The scatterplots below compare the return performance of CPFIS-included unit trusts and ILPs against their risk level (i.e. volatility). Return performance is shown on the vertical axis and the funds' volatility is on the horizontal axis. Using the median lines (dotted in red) as divider, four distinct quadrants will be formed, representing the following:

- **Quadrant A:** Funds with **above-average return** but **below-average risk**
- **Quadrant B:** Funds with **above-average return** and **above-average risk**
- **Quadrant C:** Funds with **below-average return** and **below-average risk**
- **Quadrant D:** Funds with **below-average return** but **above-average risk**

All quadrants with the exception of D are desirable depending on the employee's risk tolerance level and return requirements. Quadrant A might be seen as the most optimal choice where the fund managers have managed to produce relatively higher returns while minimizing the funds' volatility.

Over a three-year period (up to June 30, 2005), out of the entire group of CPFIS-included unit trusts, 5.05% fall into quadrant A while 24.75% of the funds are in quadrant D.

CPFIS-Included Unit Trusts

CPFIS-Included ILPs

Over the past three years up to June 30, 2005, 13.18% of the ILPs are in quadrant A while the 15.50% of the CPFIS-included ILPs had below-average returns but above-average risk, hence falling into quadrant D.

For the complete list of funds in each quadrant, please see Appendix 1.

PERFORMANCE RANKING: S&P FUND STARS

1. Background

Standard & Poor's Fund Services developed its S&P Fund Stars over a decade ago with two objectives in mind: first, to establish a global performance measurement methodology; and second, to assist investors in evaluating the return and risk management performance of investment funds.

Since then, S&P Fund Stars has become the industry standard for quantitative performance measurement. The calculation of S&P Fund Stars is robust yet simple and globally applicable: a fund's monthly performance relative to its sector average (i.e. peer average) is calculated for each of the 36 months over the three years to date. The average and volatility of these 36 numbers are then converted in a S&P Fund Stars ranking.

The distribution of the S&P Fund Stars is as follows:

★★★★★	Top 10% of the sector
★★★★	Top 11-30% of the sector
★★★	Top 31-50% of the sector
★★	Next 25% of the sector
★	Bottom 25% of the sector

It must be noted that to be eligible for a S&P Fund Stars ranking, the fund must possess a minimum of three years investment history and be in a sector where five or more funds meet this minimum investment history requirement. The calculation of S&P Fund Stars is based on the entire universe of unit trusts and ILPs that are registered for sale in Singapore and not only limited to CPFIS-included funds.

For details on the methodology of the CPFIS Risk Classification, please see Appendix 3.

FURTHER INFORMATION

Additional information can be found in the appendices:

- *Appendix 1:* Complete List of Funds in Each Quadrant of the Risk/Return Chart
- *Appendix 2:* S&P Fund Stars Methodology
- *Appendix 3:* Investment Terminology Definition

For a soft copy of this report as well as the most-to-date performance data on CPFIS-included unit trusts and ILPs, please visit www.fundsingapore.com.

NOTE

All returns are calculated on a bid-to-bid basis in SGD, with gross income re-invested.

DISCLAIMERS

The data provided in this report is for information only and not deemed to be financial advice or offer to sell, or a solicitation or an offer to buy or subscribe to or hold any fund.

Past performance is not indicative of future performance. All investments involve risk – in other words, the price of units and income from them can go down as well as up. Before investing in any fund, you should carefully read the literature about the fund, including its Explanatory Memorandum.

All data contained in this report has been provided to Standard & Poor's Fund Services by the management groups or insurers who manage the unit trusts or ILPs that are included in the CPFIS. While Standard & Poor's Fund Services has made reasonable endeavours to ensure the accuracy the information obtained, it does not accept any responsibility with regards to the accuracy or completeness of the information provided or any liability for the investment decisions of investors or any loss arising therefrom.

APPENDIX 2

S&P Fund Stars Methodology

To assist investors in evaluating the performance of a fund and the consistency of that performance relative to other funds in the sector, Standard & Poor's Fund Services has developed the S&P Fund Stars based on a fund's relative performance.

The S&P Fund Stars is calculated using a fund's monthly performance relative to its sector average for each of the 36 months over the past three years to date. The average and volatility of these 36 numbers is used to calculate the Fund Stars ranking.

To be eligible for the S&P Fund Stars, a fund must possess three years of investment history and belong to a sector that contains five or more funds, all with the minimum investment history.

S&P Fund Stars Calculation

1. RELATIVE PERFORMANCE

Definition: This is the performance of the fund less the performance of its sector average (average performance of its peers).

Example: If a fund rises 6% in a month and its sector average by 4% in the same month then the fund's relative performance is +2%. This number is calculated for each of the past 36 months.

2. AVERAGE RELATIVE PERFORMANCE

Definition: By calculating the average of the fund's latest 36 monthly relative performance, we are measuring its tendency on average to out- or under-perform the other funds in its sector. The higher the average the more the fund has outperformed its peers over the past 36 months.

3. VOLATILITY OF RELATIVE PERFORMANCE

Definition: Volatility (standard deviation) is a statistical method for measuring how much a series of values deviates (how much it moves up and down) from its average. By calculating the volatility of the fund's 36 monthly relative performance, we are measuring how consistently the fund has performed vis-à-vis its peers. The higher the volatility, the less consistent the fund's performance relative to its peers.

4. RELATIVE RETURN / VOLATILITY RATIO

Definition: By dividing the fund's average relative performance by the volatility of its relative performance, we are measuring its ability to not only outperform its peers but to also do so consistently. The higher the ratio, the greater the fund's ability to outperform its peers on a consistent basis.

$\frac{\text{Average monthly relative performance over 3 years}}{\text{Volatility of monthly relative performance over 3 years}} = \text{Relative return / volatility ratio}$

Allocation of the S&P Fund Stars

Suppose a sector contains 100 funds, then the S&P Fund Stars will be allocated as follows:

★★★★★	Top 10%	10 funds
★★★★	Top 11-30%	20 funds
★★★	Top 31-50%	20 funds
★★	Next 25%	25 funds
★	Bottom 25%	25 funds

Examples

A fund with a ratio in the top 10% of its sector receives 5 Stars, whilst a fund with a ratio in the bottom 25% of its sector receives a 1 Star.

	Relative Return	Relative Volatility	Ratio	Rank	S&P Fund Stars
Fund A	50%	5	10.0	1	★★★★★
Fund B	30%	6	5.0	5	★★★
Fund C	10%	4	2.5	9	★
Fund D	30%	4	7.5	2	★★★★
Fund E	40%	6	6.6	3	★★★★
Fund F	20%	4.5	4.4	6	★★
Fund G	30%	5	6.0	4	★★★
Fund H	3.4%	1	3.4	7	★★
Fund I	2.7%	1	2.7	8	★★
Fund J	6.0%	3	2.0	10	★

Funds with identical performance but different volatility will have different ratio. In the example below, the returns of Fund F and Fund G are identical, however our consistency analysis shows that the volatility of G is greater than F, therefore F has a higher S&P Fund Star ranking than G.

	Relative Return	Relative Volatility	Ratio	S&P Fund Stars
Fund F	50%	5	10.0	★★★★
Fund G	50%	6	8.3	★★★

On the other hand, funds with different returns and risk levels can have the same S&P Fund Star ranking. As an illustration, although Funds H and J both have 3 stars, H has a higher return than J, while J has lower volatility.

	Relative Return	Relative Volatility	Ratio	S&P Fund Stars
Fund H	50%	5	10.0	★★★
Fund J	40%	4	10.0	★★★

From this example, we can see that despite their difference in return and volatility, the performance consistency experienced by each of the funds is identical, hence warranting the same S&P Fund Stars ranking.

APPENDIX 3

Investment Terminology Definition

Risk Classification

CPF Board's consultant, Mercer Investment Consulting, has developed a risk classification system for the CPFIS that assigns various risk levels to permitted investments. The unit trust or ILP with a greater proportion of its assets invested in the more volatile stock market will have a higher Equity Risk. Conversely, the greater the proportion of the fund's assets that are in bonds and cash, the lower its Equity Risk. Based on their level of Equity Risk, CPFIS-included unit trusts and ILPs will be assigned one of the following risk categories:

- Lower Risk
- Low to Medium Risk
- Medium to High Risk
- Higher Risk

As of June 30, 2005, the distribution of CPFIS-included investments in the four different risk categories is as below:

Risk Classification	Unit Trusts	ILPs
Higher Risk	165	96
Medium to High Risk	50	53
Low to Medium Risk	28	31
Lower Risk	5	9

Further information on the CPFIS Risk Classification System can be found in the handbook entitled "CPF Investment Scheme Risk Classification System – Investing to Match your Risk Profile," which can be obtained from any CPF office, agent bank or management group that is included in CPFIS. Alternatively, the handbook can also be downloaded from this link: http://www.cpf.gov.sg/cpf_info/Publication/riskclas.asp.

Quantitative Analysis

- **Expense Ratio:** The operating costs, including management fees, of a CPFIS-included unit trust or ILP expressed as a percentage of the fund's average net assets for a given time period. The expense ratio is furnished to Standard & Poor's Fund Services by the management groups and insurers, and is calculated according to the guidelines set out by the Investment Management Association of Singapore (IMAS).

In accordance to IMAS' guidelines, the expense ratio is calculated as the average of the annualized expense ratios of the two last six-month periods, stated on an annualized basis. The formula for this is as follows:

$$\frac{\text{Expenses}}{\text{Net Asset Value}} \times 100\%$$

Items taken as expenses in the above calculation include, but are not limited to:

- Management fee
- Trustee fee
- Administration fee
- Custodian, sub-custodian and depository fees
- Registrar fees
- Printing & distribution costs
- Audit fees
- Amortized expenses
- GST on expenses

On the issue of feeder funds, to ensure their comparability with direct investment funds, the expense ratio should look through the feeder structure and include all expenses incurred at both the Singapore and parent-fund level. The calculation guidelines for feeder funds' expense ratio are as follows:

- Annualized expense ratio for the Singapore feeder fund plus that of the parent-fund
- Both components of the expense ratio should be calculated in accordance to requirements specified above.

For further information, please refer to <http://www.imas.org.sg>

- **Gain/Loss Ratio:** This is the sum of positive percentage fund returns divided by the sum of negative percentage fund returns over the past three years to date. The higher the resultant ratio, the greater the proportion of positive returns versus negative returns, hence the better the fund's performance.
- **Information Ratio:** Information Ratio is calculated by taking the monthly difference between a fund's gross return and its benchmark return (in this case the sector average of the S&P sector into which the fund falls), and then dividing that figure by the standard deviation of the monthly differences. This ratio helps investors understand how well the fund has been managed on a risk-adjusted basis relative to its peers.
- **Maximum Loss:** The worst three-month return produced by a fund over the past three years to date.
- **Sharpe Ratio:** Developed by William Sharpe, it is a measurement of a fund's annualized return that is in excess of the risk-free rate (a theoretical interest rate that would be returned on an investment that is completely free of risk) and adjusted for the fund's volatility. The calculation is as follows: (Fund Return – Risk-Free Return)/Fund Standard Deviation. From this formula, it can be derived that the higher a fund's Sharpe ratio, the better its returns relative to the amount of investment risk it has taken.

The reason this relationship between risk and return holds is simple: the higher a fund's standard deviation, the larger the denominator of the Sharpe ratio. Hence, a larger numerator (fund's excess return) will be required to have a high Sharpe ratio. Conversely, a fund with moderate returns will have a relatively small numerator, however, should its volatility also be low, the fund's Sharpe ratio can still be quite high.

- ***Standard Deviation:*** A proxy for the risk level of a fund, standard deviation measures the annualized variability of a fund's returns. A high standard deviation indicates that a fund's returns have been volatile while a low figure would be the reverse.

END OF REPORT
