FOOTNOTES:

1 For additional detail, including an explanation of methodology and approach, please visit the internet website: www.MercerFundWatch.com/cpf/

2 Return Relative to Benchmark = Return of Fund less Benchmark Return

3 Risk-Adjusted Ratio = Return of Fund / Standard Deviation of Returns

Standard Deviation is a measure of the absolute variability of returns. It is commonly used as a measure of the volatility of returns or investment risk. A higher value indicates greater fluctuations and hence greater volatility. All else equal, the higher the Risk-Adjusted Ratio, the better.

4 Information Ratio = Return Relative to Benchmark / Standard Deviation of Return Relative to Benchmark

The Information Ratio is a measure of the value which has been added by the manager per unit of risk taken versus the benchmark. All else equal, the higher the Information Ratio, the better.

5 Expense Ratio is calculated based on IMAS guidelines. For further information, please refer to <http://www.imas.org.sg>
