1 INTRODUCTION

Lipper has been appointed by Investment Management Association of Singapore (IMAS) and Life Insurance Association of Singapore (LIAS) to monitor the performance of all unit trusts and investment-linked insurance products included under the CPF Investment Scheme (CPFIS). This report shows Lipper's findings for the three months ended September 30, 2009.

Important Disclaimers:

The data shown in this report is information for investors and is not a solicitation to buy, sell, or hold any fund. Past performance is not an indicator of future performance. Past performance is no guarantee of future return. This report should not be used as the sole basis for any investment decision. Before investing in any fund, investors should carefully read the prospectus or other necessary information about the fund. Lipper has used reasonable efforts in preparing this report based on data collected from the contributing asset management companies. However, Lipper doesn't guarantee the accuracy of the data contained herein and will not bear any responsibility for investment decisions of investors or for any loss arising on using the data presented in this report.

2 UPDATES ON CPFIS-INCLUDED FUNDS

As of September 30, 2009, there were 166 unit trusts and 178 investment-linked insurance products (ILPs) included under the CPFIS¹. During third quarter 2009, there was one new unit trust and no new ILP added into the CPFIS, while 3 unit trusts that were previously under the CPFIS were delisted.

3 MARKET DEVELOPMENTS IN Q3 2009

3.1 Equity Markets

Global equities took an exuberant turn in the second quarter of 2009, on the back of improving macro-economic conditions driven by emerging economies, rising risk appetites and declining volatility; the MSCI World Index ended Q2 2009 up 15.25%. While third quarter 2009 continued to see a steady stream of similar positive economic data (slowing unemployment and GDP contraction rates, with Q2 GDP growth in a few economies, and improving consumer and business confidence), market movements during the quarter were characterized by bullish trends in July, a brief correction in August among emerging equities (as investors booked profits after a near five-month-long rally upon fears that policymakers globally might withdraw the stimulus measures of recent months), and a return to form in September. As a result, the MSCI World Index (+14.46% for the quarter) slightly underperformed relative to the previous quarter; to further illustrate, the MSCI Emerging Markets Index returned 28.38% during Q2 2009 versus 15.25% for Q3 2009.

The sharpest correction in August was among China stocks (-21.81%), after global market-leading returns and soaring valuations for the first 7 months of 2009 (the Shanghai Composite gained 87.38% for the year-to-July) and amid speculation that the government might step up efforts to staunch the excessive flows into property/stocks (nearly US\$1.08 trillion was issued by Chinese banks in new loans, for the first half of 2009). The correction in Chinese equities had a ripple-effect on the equity markets in Hong Kong, Singapore (owing to China stocks listed there) and Taiwan as well. As expected, however, the correction was short-lived, and emerging market equities roared back into positive territory in September, especially in the BRIC contingent, with stronger domestic currencies vis-à-vis the US dollar lending further support. The one exception during the month was Japanese equities, which lost 3.42% amid a fast-appreciating yen and squeezed exporters' margins.

For the quarter in question, the leading gainers among emerging markets were Russia (+27.10%), Korea (+21.75%) and Thailand (+20.02%). Interestingly enough, European equities rounded out the top five equity markets for third quarter 2009 (CAC 40: +20.86%, FTSE 100: +20.82%), as the developed markets were largely untouched by the correction in August. The S&P500 nearly matched its Q2 2009 performance (+15.22%), rising 14.98% during Q3 2009.

Singapore markets too benefited from the stronger domestic currency and a surge in portfolio inflows, rising a healthy 14.55% (STI), with support from steadily improving GDP growth numbers. The advance Q3 GDP growth figure released in the second week of October was a growth of 14.90% on a quarter-on-quarter basis (the corresponding number at the end of Q2 2009 was a 20.40% growth) and was better than the previously forecasted 13.20%.

3.2 Bond Markets

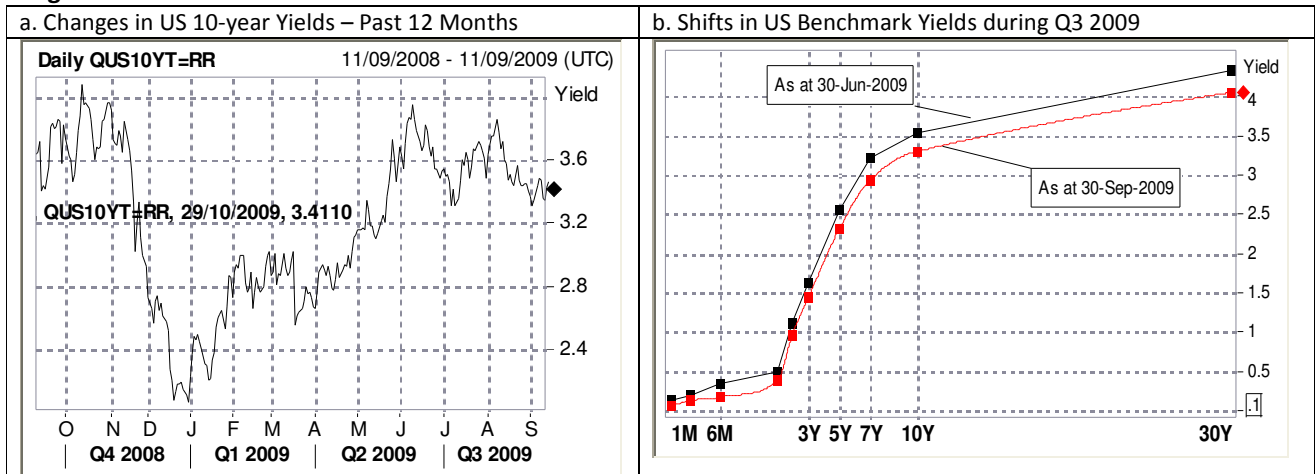

For the quarter in question, most central banks elected to keep key interest rates unchanged, with the Federal Reserve, the Bank of England and the European Central Bank all indicating that rates would be kept low at least for the remainder of the year. For the first two months of the quarter, the focus remained on quantitative and credit easing; the BoE announced in the first week of August, a significant expansion in size of its bond-purchase program (which now stands at GBP175 billion), while the Fed kept its treasury and toxic asset purchase program unchanged. But September could spell the start of a gradual retraction of this focus, even as quantitative easing programs continue to be supportive of the markets; for instance, US policymakers let their treasury and toxic asset buyback program end its course in September, while the Bank of Japan is considering ending its own bond purchase program.

Treasury yields ended steadily lower over the course of third quarter 2009, despite the return of risk appetites and inflows into riskier asset classes, as indications emanating from central bank policy decisions continue to spell low rates. Credit markets narrowed further during the quarter; the TED spread (the difference between the three-month U.S. Treasury-Bill rate and the three-month LIBOR) fell a total of 23 basis points to 0.18%, reaching yet another 3-year low. Spreads tightened by higher

margins in the riskier high-yield bond space; this continues to support the themes that market conditions are becoming more conducive to a return to normalcy and growth, that such growth might be led by emerging markets, and that investor confidence in the efficacy of various government stimulus measures is rising. The most appreciable shifts in benchmark US yield curves occurred among longer-term treasuries; 10-year yields fell 23 basis points during the third quarter of the year, to close at 3.31%. 3-month yields fell by another 7 basis points to reach near-zero levels (0.12%) at quarter's end.

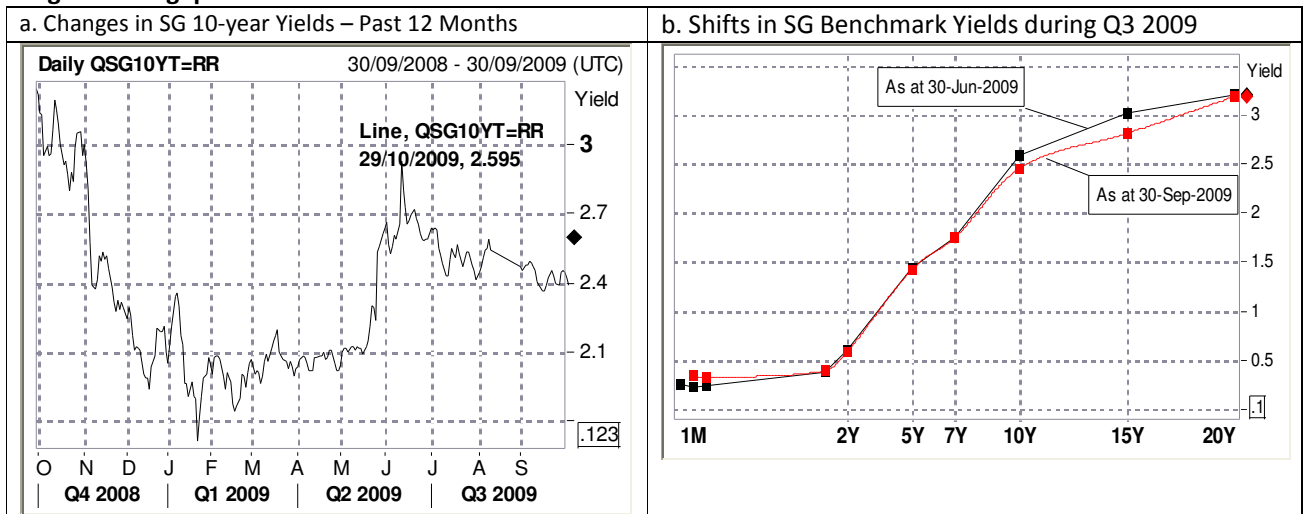

The Singapore bond market largely marched in place during third quarter 2009, and bond yields were in line with the global interest rate trend. Singapore 15-year government bond yields fell the most (21 basis points) to 2.81%, while 3-month yields rose 8 basis points to 0.32%, during third quarter 2009.

5 SUMMARY OF PERFORMANCE OF CPFIS-INCLUDED FUNDS

The average return² of CPFIS-included funds, unit trusts, and investment-linked insurance products is shown below:

Figure 3 Average Performance of CPFIS-Included Funds at End-Q3-2009 (% in SGD)

Source: Lipper

In third quarter 2009 the overall performance of CPFIS-included funds showed a gain of 12.09% on average, with a 12.81% gain for CPFIS-included unit trusts, and a 11.42% gain for CPFIS-included investment-linked insurance products.

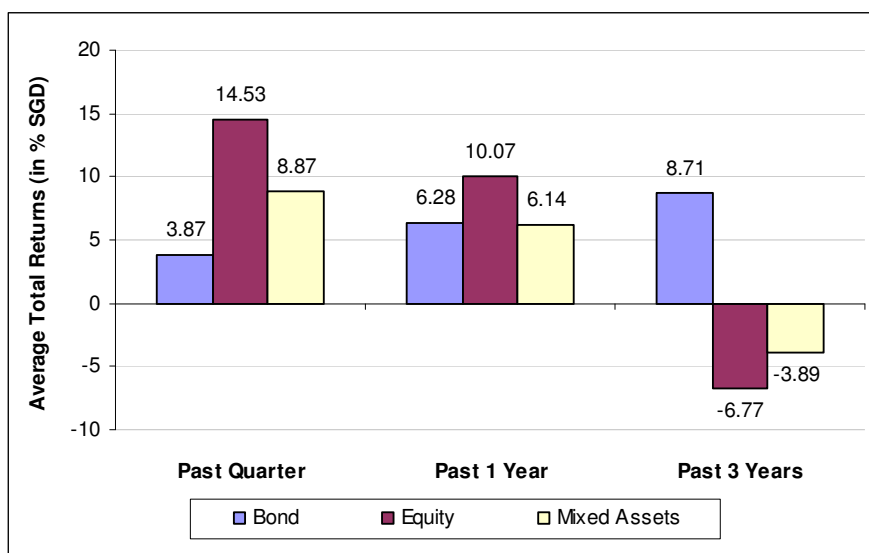

For the one-year period ending 30-September-2009, both CPFIS-included unit trusts and CPFIS-included investment-linked insurance products finished up 9.28% on average. CPFIS-included unit trusts advanced 9.06% on the year, while CPFIS-included investment-linked products ended with a gain of 9.34% on average.

For the three-year period to September-2009, CPFIS-included funds registered a negative 3.58% growth on average, accounted for by a loss of 5.29% on average from CPFIS-included unit trusts and a loss of 2.27% on average from CPFIS-included investment-linked insurance products.

² Average performance is calculated by a summation of all returns of funds in the group divided by the number of funds.

The average return of CPFIS-included unit trusts by asset class³ is shown below:

Figure 4 Average Performance of CPFIS-Included Unit Trusts at End-Q3-2009 by Asset Class (% in SGD)

Source: Lipper

In second quarter 2009, the best performing asset class was equity funds, with a 14.53% gain on average. Mixed asset portfolios too made healthy gains at 8.87% on average, while bond portfolios advanced 3.87% on average, on the quarter.

For the 12-month period to September 2009 too, all classes ended in positive territory. Bond and mixed asset portfolios were both profitable, gaining 6.28% and 6.14% respectively, while equity offerings ended the year up 10.07%.

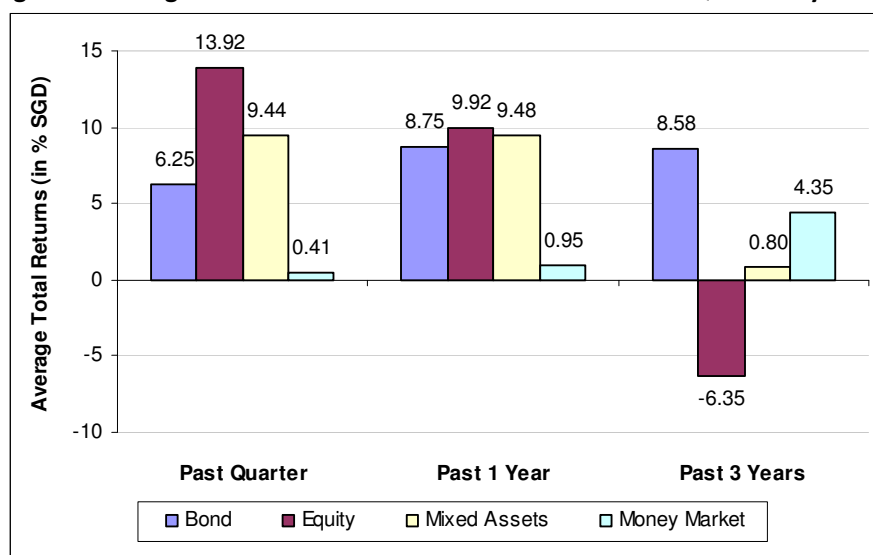

For the three-year period ending 30-September-2009, bond funds posted positive returns of 8.71% on average, while portfolios allocating to equities showed a loss; equity funds registered a negative 6.77% on average, while mixed-asset funds suffered a retreat of 3.89% on average.

³ Definition of asset types is as follows:

- Equity : Funds with the primary investment objective of investing in stock markets
- Bond : Funds with the primary investment objective of investing in fixed income markets with an average maturity > 1 year
- Mixed-asset : Funds with the primary investment objective of investing in a strategic mix of equities and fixed income securities
- Money market : Funds with the primary investment objective of investing in fixed income markets with an average residual life to maturity < 12 months

The average return of CPFIS-included investment-linked insurance products by asset class is shown below:

Figure 5 Average Performance of CPFIS-Included ILPs at End-Q3-2009 by Asset Class (% in SGD)

Source: Lipper

ILP portfolios ended the third quarter of 2009 in positive territory across all asset classes, although money market funds – gaining 0.41% on average – were only marginally so. Other asset classes, however, posted healthy gains on the quarter; bond funds returned 6.25%⁴ on average, while equity funds and mixed-asset funds posted gains of 13.92% and 9.44% on average, respectively.

For the one-year period under review, all ILP portfolios, save money market offerings, posted healthy gains; on average, money market funds finished the year nearly flat after gains of 0.95%, while bond, equity and mixed-asset offerings were up 8.75%, 9.92% and 9.48% respectively.

Conversely, the outperforming classes over the three-year period were bond and money market funds, gaining 8.58% and 4.35% on average, respectively. The rest of the classes suffered flat to negative growth; equity funds shed 6.35%, while mixed-asset funds were up a marginal 0.80% on average.

⁴ These are asset-class averages and figures might differ from LGC averages (see Table 7). For instance, Greatlink Choice (Oct 2010), a 'Protected' fund under the Lipper Global Classification scheme, was included in the calculation of the bond ILPs' average.

The average return of CPFIS-included Unit Trusts by Lipper Global Classification⁵ is shown below:

Remark: An average calculation includes the different share classes of the funds.

6 SUMMARY OF RISK-ADJUSTED PERFORMANCE

The Lipper Leader rating methodology consists of four metrics that rate funds' success in meeting certain goals:

- **Total Return: Ability of a fund to provide superior total return compared to its peers**
- **Consistent Return: Ability of a fund to provide relatively superior consistency and risk-adjusted return compared to its peers**
- **Preservation: Ability of a fund to demonstrate superior preservation of capital in a variety of markets compared with other funds in its asset class**
- **Expense: Ability of a fund to successfully manage to keep its expenses low relative to its peers and within its load structure**

Funds are ranked against their Lipper peer group classifications for a three-year period. In other words, if a fund doesn't have at least three years of historical performance and it is not in a group with more than five funds, it is not rated by Lipper. The rating is based on an equal-weighted average of percentile ranks of the four Lipper Leader metrics.

For each metric:

The top 20% of funds receive a rating of '5' and are named **Lipper Leaders**.

The next 20% of funds receive a rating of '4.'

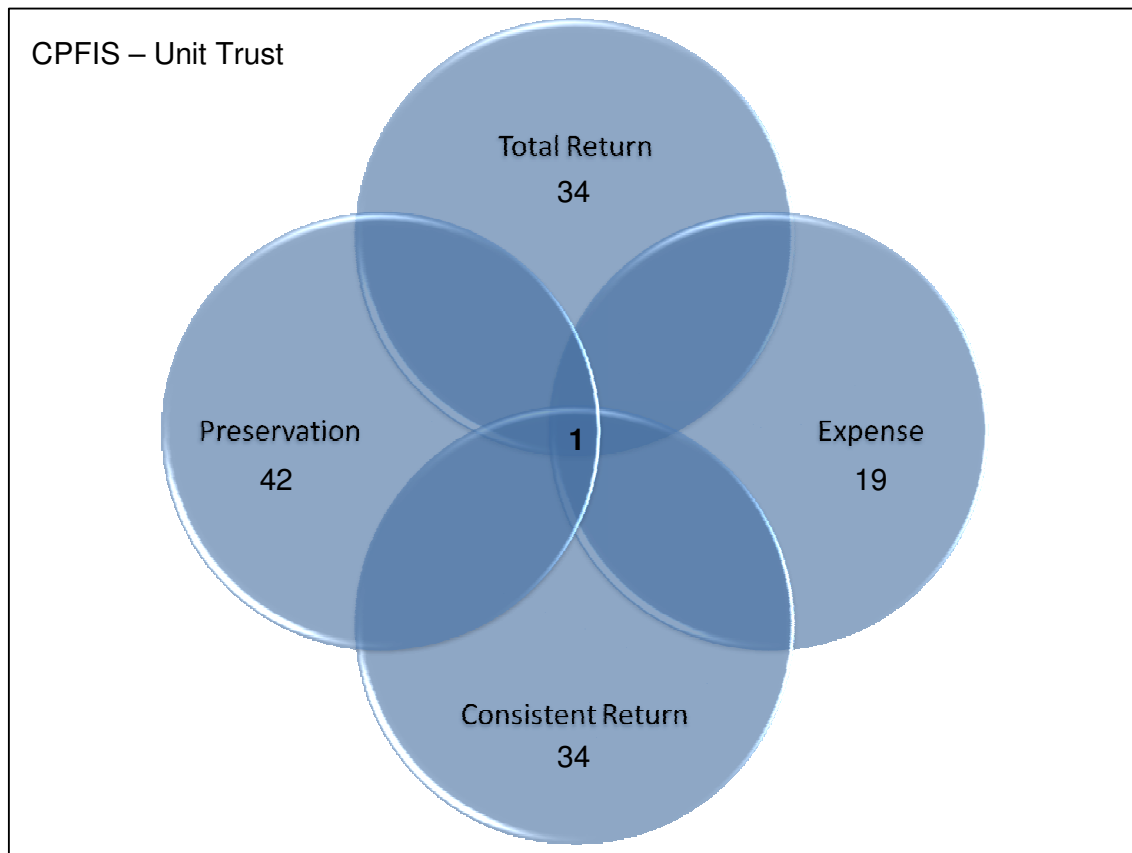

The middle 20% of funds receive a rating of '3.'

The next 20% of funds receive a rating of '2.'

The lowest 20% of funds receive a rating of '1.'

6.1 Lipper Leader Rating for CPFIS-Included Unit Trusts

Figure 6 Venn Diagram of CPFIS-Included Unit Trusts With Lipper Leader Rating (Rating of '5')

Source: Lipper

As of the end of March 2009 the number of CPFIS-included unit trusts in the top 20% of funds, receiving a rating of '5' and named Lipper Leaders in each metric, were as follows:

- Total Return: 34 funds
- Consistent Return: 34 funds
- Preservation: 42 funds
- Expense: 19 funds

There was only one CPFIS-included unit trust receiving a rating of '5' (Lipper Leader) in all four metrics.

6.2 Lipper Leader Rating for CPFIS-Included ILPs

Figure 7 Venn Diagram of CPFIS-Included ILPs With Lipper Leader Rating (Rating of '5')

Source: Lipper

As of the end of March 2009 the number of CPFIS-included ILPs in the top 20% of funds, receiving a rating of '5' and named Lipper Leaders in each metric, were as follows:

- Total Return: 30 funds
- Consistent Return: 34 funds
- Preservation: 44 funds
- Expense: 2 funds

There was no overlap among CPFIS-included ILPs receiving a rating of '5' (Lipper Leader) in each of the four metrics.

7.2 Lipper Leader Rating Methodology

Unlike many competing quantitative measures, the strength of the Lipper Leader rating system is that it uses investor-centered criteria and not asset- or style/strategy- based criteria. These investor-centered criteria deliver clear, straightforward descriptions of a fund's success in meeting certain goals, such as preserving capital or building wealth through consistent, strong returns.

Investor-centered measures of fund performance and suitability

The Lipper Leader rating system consists of four metrics that provide clear, straightforward descriptions of a fund's success in meeting certain goals for constructing individualized portfolios.

 **Total Return**

 **Consistent Return**

 **Preservation**

 **Expense**

Determine whether you are investing in funds that fit your investment goals

Lipper Leaders provide context and perspective for making informed investment decisions but do not predict future performance. Funds are ranked against their Lipper peer group classifications each month for three-, five-, and ten-year periods and for the overall period. These are based on an equal-weighted average of percentile ranks of the four Lipper Leader metrics.

For each metric:

-  The top 20% of funds receive a rating of '5' and are named **Lipper Leaders**.
-  The next 20% of funds receive a rating of '4.'
-  The middle 20% of funds receive a rating of '3.'
-  The next 20% of funds receive a rating of '2.'
-  The lowest 20% of funds receive a rating of '1.'

Lipper Leader Metrics

Total Return

The Lipper Leader rating for Total Return denotes a fund that has provided superior total return (income from dividends and interest as well as capital appreciation) compared to a group of similar funds. A Lipper Leader for Total Return may be the best fit for investors who want the best historical return, without looking at risk. This measure alone may not be suitable for investors who want to avoid downside risk. For more risk-averse investors the Total Return ratings can be used with Preservation and/or Consistent Return ratings to make an appropriate selection that balances risk and return.

Expense

The Lipper Leader rating for Expense identifies a fund that has successfully managed to keep its expenses low relative to its peers and within its load structure. A Lipper Leader for Expense may be the best fit for investors who want to minimize their total costs. This measure can be used in conjunction with Total Return or Consistent Return to identify funds with above-average performance and lower-than-average cost.

Consistent Return

The Lipper Leader rating for Consistent Return identifies a fund that has provided relatively superior consistency and risk-adjusted returns compared to a group of similar funds. Funds that achieve high ratings for Consistent Return may be the best fit for investors who value a fund's year-to-year consistency relative to other funds in a particular peer group.

Investors are cautioned that some peer groups are inherently more volatile than others, and even Lipper Leaders for Consistent Return in the most volatile groups may not be well suited to shorter-term goals or less risk-tolerant investors.

Preservation

The Lipper Leader rating for Preservation is a fund that has demonstrated a superior ability to preserve capital in a variety of markets compared with other funds in its asset class.

Choosing a Lipper Leader for Preservation may help to minimize downside risk relative to other fund choices in the same asset class. Investors are cautioned that equity funds have historically been more volatile than mixed-equity or fixed income funds, and that even a Lipper Leader for Preservation in more volatile asset classes may not be well suited to shorter-term goals or less risk-tolerant investors.

7.3 Investment Terminology Definitions

CPFIS Risk Classification

The CPFIS Risk Classification System splits the investment risk associated with an investment into two broad components: equity risk and focus risk⁶. For example, a fund with a higher number of more volatile equities in its portfolio will have a greater level of equity risk. Further information on the CPFIS Risk Classification System may be found under “CPFIS Risk Classification System—Investing to Match Your Risk Profile” at <http://ask-us.cpf.gov.sg/explorefaq.asp?category=21634>.

Lipper Global Classification

The Lipper Global Classification (LGC) is the unique fund classification system developed by Lipper to assist fund information users in comparing fund performance within a reasonable peer group. Its purpose is to create homogeneous groups of funds with comparable investment objectives. We refine our existing classifications to ensure meaningful peer groups and add new classifications in response to client requests and market trends.

For more information, please visit <http://www.lipperweb.com/services/definitions.asp>.

Quantitative Analysis

- **Return**

All returns are calculated on a NAV-to-NAV basis in Singapore dollars with dividends reinvested. The gain or loss of a particular fund in a particular period is calculated with the following formula:

Performance

$$\text{Percentage Growth} = \frac{\text{NAV}_t - \text{NAV}_{t-1}}{\text{NAV}_{t-1}}$$

For simple return:

$$\text{Performance Annualized} = \left(1 + \text{Percentage Growth}\right)^{\frac{\text{Number of Time Units Per Year}}{\text{Number of Time Units in Period}}} - 1$$

- **Return Relative to Benchmark**

Relative return is a measure of fund performance relative to benchmark performance. It is calculated as the difference between fund return and the benchmark return over a given period. Higher relative return means better fund performance relative to benchmark performance.

⁶For more information, please visit

http://ask-us.cpf.gov.sg/Home/Hybrid/themes/CPF/Uploads/Investment/INV_Components%20under%20Risk%20Class%20System.pdf

Formula:

$$\text{Relative Return} = \text{Fund Return} - \text{Benchmark Return}$$

▪ Expense Ratio

Expense ratio expresses the management, trustee, and certain other expenses of a managed fund as a proportion of the net asset value of the fund. The expense ratio expresses the sum of all operating expenses charged on an ongoing basis to the fund's assets as a percentage of the fund's average net asset value and is calculated using the following formula:

$$\text{Expense Ratio (\%)} = \frac{\text{Total operating expenses}}{\text{Average Net Asset Value}} * 100$$

For more info, see http://www.imas.org.sg/loadhtml.php?sid=eb53409575c66343628eb7faa41a4e20&where=imas&what=rc_industry_best_practice.php.

▪ Information Ratio

Information ratio is a risk-adjusted measure of fund performance relative to benchmark performance. The fund benchmark can be found in the supplementary document Return Performance Review. The information ratio is given by the ratio of average relative return (excess return) and tracking error. Tracking error or tracking risk refers to the volatility or standard deviation of the investment manager's excess return over benchmark return. A higher information ratio means better fund performance relative to benchmark performance on a risk-adjusted basis.

Formula:

$$\text{Information Ratio} = \frac{\text{Average Relative Return}}{\text{Tracking Error}}$$

$$\text{Information Ratio Annualized} = \sqrt{\frac{\text{Number of Time Units Per Year}}{\text{Number of Time Units Per Sub Period}}} \times \text{Information Ratio}$$

▪ Sharpe Ratio

Sharpe ratio is a risk-adjusted measure of performance developed by William F. Sharpe; it is also known as the reward-to-volatility ratio. It is calculated as the average subperiod excess return divided by the standard deviation of subperiod excess return over a given period. Subperiod excess return is the difference between the investment return and CPFIS-OA guaranteed interest rate for a subperiod. A higher Sharpe ratio means better fund performance relative to the risk-free rate on a risk-adjusted basis. Sharpe ratio is a special form of information ratio where the risk-free rate is the benchmark.

Formula:

$$\text{Sharpe Ratio} = \frac{\text{Average Sub Period Excess Return}}{\text{Standard Deviation of Sub Period Excess Returns}}$$

$$\text{Sharpe Ratio Annualized} = \sqrt{\frac{\text{Number of Time Units Per Year}}{\text{Number of Time Units Per Sub Period}}} \times \text{Sharpe Ratio}$$

▪ **Standard Deviation**

Standard deviation is a measure of investment risk or volatility in subperiod returns. It is calculated as the square root of variance, which is the average of subperiod squared deviations over a given period. Higher standard deviation means higher risk.

Formula:

$$\text{Variance} = \frac{\sum (\text{Sub Period Returns} - \text{Average Return})^2}{\text{Number of Sub Periods} - 1}$$

$$\text{Standard Deviation} = \sqrt{\text{Variance}}$$

$$\text{Standard Deviation Annualized} = \sqrt{\frac{\text{Number of Time Units Per Year}}{\text{Number of Time Units Per Sub Period}}} \times \text{Standard Deviation}$$

▪ **Max Gain**

Maximum gain is the most positive monthly return over a given period.

Formula:

$$\text{Maximum Gain} = \text{Max (Positive Sub-Period Returns)}$$

▪ **Max Loss**

Maximum loss is the most negative monthly return over a given period.

Formula:

$$\text{Maximum Loss} = \text{Min (Negative Sub-Period Returns)}$$

▪ **Return/Risk**

Return to risk is a measure of risk-adjusted performance. It is calculated as the average return divided by the standard deviation of subperiod returns over a given period. Higher return/risk means better fund performance relative to fund volatility on a risk-adjusted basis.

Formula:

$$\text{Return to Risk} = \frac{\text{Average Return}}{\text{Standard Deviation}}$$

$$\text{Return to Risk Annualized} = \sqrt{\frac{\text{Number of Time Units Per Year}}{\text{Number of Time Units Per Sub Period}}} \times \text{Return to Risk}$$
